

Mytilus californianus Mytilus californianus

Laminaria groenlandica Laminaria groenlandica

Nereocystis luetkeana Nereocystis luetkeana

franciscanus

Sargassum muticum

The Habitat Type is based on the whole unit and is similar to the physical mappers use of the 'Coastal Class' category, in that the detailed across-shore data are summarized into one attribute. The simplified category describes the features of the whole unit.

SE - Semi Exposed - High wave exposure, open shorelines, areas between fully exposed and more sheltered, usually fetches 50 to 500km

Habitat Type is a summary of the biophysical classification of the whole shore unit, based on:

E - Exposed - Very high wave exposure, open ocean swellsm usually fetches >500km VE - Very Exposed - Extreme high wave exposure

P - Protected - Low wave expsoure, sheltered inlets, usually fetches less than 10km

SP - Semi Protected - Moderate wave expsoure, partly sheltered, usually fetches 10-50km

VP - Very Protected - Very low wave exposure, fethces < 1km, sheltered anchorages at heads of bays and inletes

• □ the biobands observed,

• □ the substrate types in the unit.

Legend Definitions CC - Coastal Classification number

• □ the wave exposure as indicated by the bands, and
