○	Unit Break Points
○	Undefined
Immobile Substrates	
1 - Bedrock - CC 1-20 - VE	
2 - Bedrock - CC 1-20 - E	
3 - Bedrock/Boulder - CC 1-23, 32, 33 - SE	
4 - Bedrock/Gravel - CC 1-23, 33 - SP	
5 - Bedrock/Gravel - CC 1-23, 33 - P/V	
Tidal Lagoon	
6 - Sand & Gravel - CC 24-26, 32 - SP	
7 - Sand & Gravel - CC 24-26, 32 - VP/P	
8 - Estuary or Sand/Mud - CC 27-31 - VP/SP	
9 - Sediment - CC 21 - 30 - SE/E	
Current Dominated	
10 - Bedrock or Sediment - CC 34 - VP/P/SP	
11 - Bedrock or Sediment - CC 35 - VP/P/SP	
Rock Shores	
Characterized by a lack of clastic sediments such as gravel or sand.	
1 - Rock Rampe, Wide	Substrates that have substrates that have little or no bedrock crossing out
2 - Rock Platform, Wide	21 - Gravel Flat, Wide
3 - Rock Rampe, Narrow	22 - Gravel Beach
4 - Rock Rampe, Narrow	23 - Sand Beach, Wide
5 - Rock Platform, Narrow	24 - Sand and Gravel Flat or Fan, Wide
6 - Rock Platform, Narrow	25 - Sand Beach, Narrow
7 - Rock with Gravel Beach, Wide	26 - Sand Beach, Narrow
8 - Rock with Gravel Beach, Wide	27 - Sand Beach, Wide
9 - Rock with Gravel Beach, Narrow	28 - Sand Beach
10 - Rock with Gravel Beach, Narrow	29 - Sand Beach, Narrow
11 - Cliff with Sand and Gravel Beach, Wide	30 - Sand Beach, Narrow
12 - Cliff with Sand and Gravel Beach, Wide	31 - Clusters
13 - Cliff with Sand and Gravel Beach, Narrow	
14 - Cliff with Sand and Gravel Beach, Narrow	
15 - Platform with Sand and Gravel Beach, Narrow	
16 - Platform with Sand and Gravel Beach, Narrow	
17 - Cliff with Sand Beach, Wide	
18 - Cliff with Sand Beach, Wide	
19 - Cliff with Sand Beach, Narrow	
20 - Platform with Sand Beach, Narrow	
21 - Platform with Sand Beach, Narrow	
22 - Cliff with Sand Beach, Wide	
23 - Cliff with Sand Beach, Narrow	
24 - Channel	
25 - Very Exposed - High wave exposure, open ocean swellism usually fetches >500km	
26 - Very Exposed - Extreme high wave exposure	
27 - Semi Exposed - High wave exposure, open shorelines, areas between fully exposed and more sheltered, usually fetches 50 to 500km	
28 - Protected - Low wave exposure, sheltered inlets, usually fetches less than 10km	
29 - Semi Protected - Moderate wave exposure, partly sheltered, usually fetches 10-50km	
30 - Very Protected - Very low wave exposure, fetches < 1km, sheltered anchorages at heads of bays and inlets	

Shoreline Habitat

The Habitat Type provides a simplified picture of the "look" of the unit overall, based on the detailed biophysical attributes that have been mapped. The Habitat Type category is a summary of the observations of both the unit's biological and geomorphological features.

Each Habitat Type has a definition that includes the typical substrate, wave exposure and biobands. For example, for the Semi-exposed, Immobile substrate Habitat Type, part of the definition of that class is a certain combination of the most likely biobands and indicator species present at a bedrock shoreline with no mobile sediment present.

How is Habitat Type determined?

Each Habitat Type has typical biological features (including both an indicator species list and typical associated biobands).

To determine the Habitat Type, the biomapper looks at the along-shore Units as designated and described by the physical mapper, and:

1. reviews the physical mapping information, and

2. assigns a bio-break (wave) exposure category,

3. reviews the physical mapped information, and

4. assigns the Habitat Type that best describes the unit.

The Habitat Type is based on the whole unit and is similar to the physical mappers use of the 'Coastal Class' category, in that the detailed across-shore data are summarized into one attribute. The simplified category describes the features of the whole unit.

Habitat Type is a summary of the biophysical classification of the whole shore unit, based on:

- the wave exposure as indicated by the bands, and

- the substrate types in the unit.

Legend Definitions

CC - Coastal Classification number

Wave Exposure

E - Exposed - High wave exposure, open ocean swellism usually fetches >500km

V - Very Exposed - Extreme high wave exposure

SE - Semi Exposed - High wave exposure, open shorelines, areas between fully exposed and more sheltered, usually fetches 50 to 500km

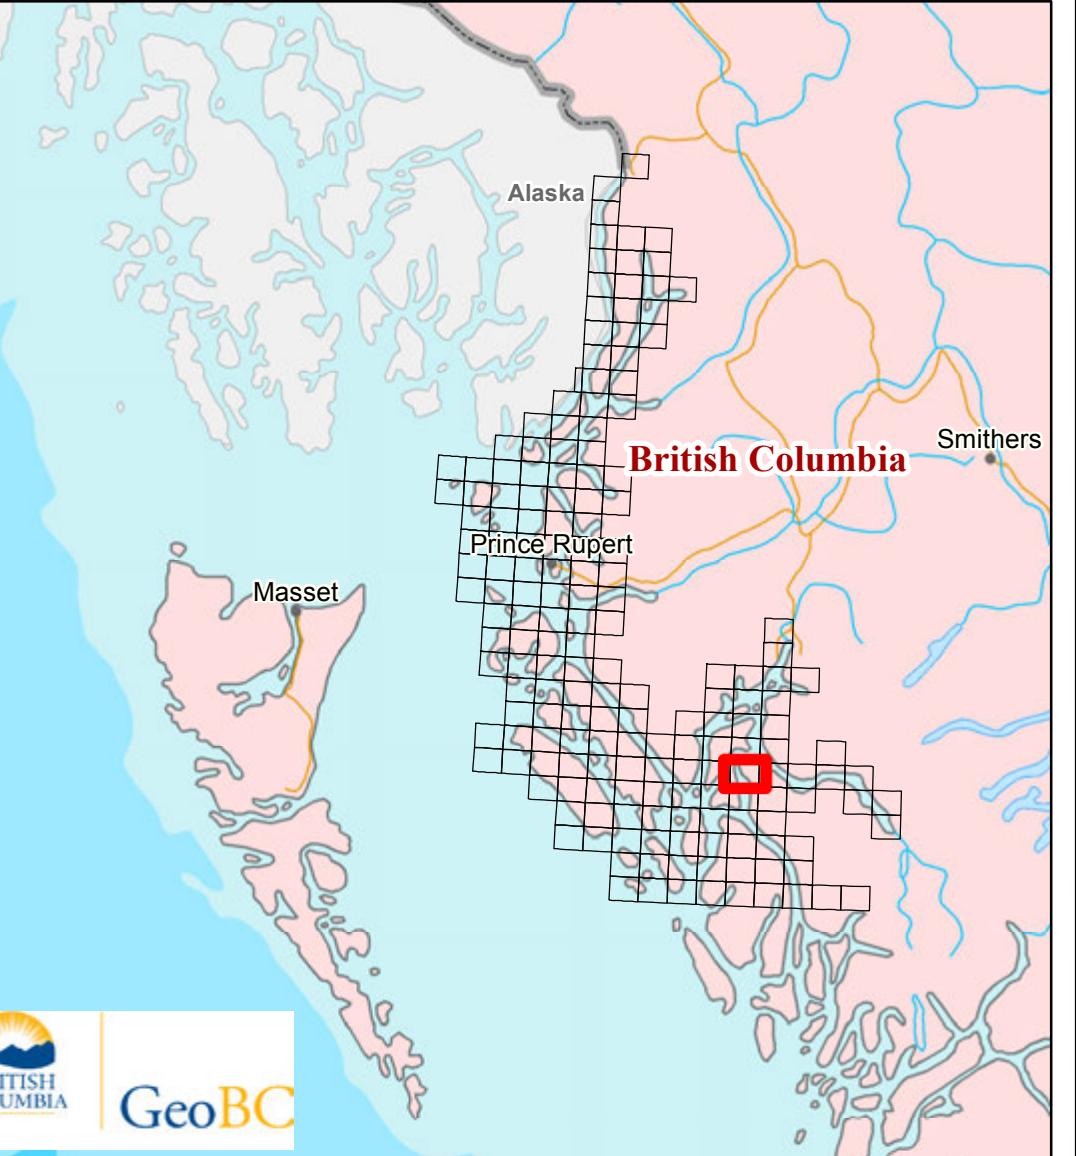

P - Protected - Low wave exposure, sheltered inlets, usually fetches less than 10km

SP - Semi Protected - Moderate wave exposure, partly sheltered, usually fetches 10-50km

VP - Very Protected - Very low wave exposure, fetches < 1km, sheltered anchorages at heads of bays and inlets

Table MIDCOAST and NORTH COAST project area which includes BIO AREAS CC, JS and NC. The Species wave exposure/substrate table for Habitat Classification (HAIR_OBS), for the Mid-coast BC study area, from Johnstone Strait/Central Coast Mapping Regions 5 and 7.
